

# DSP Computer Project

Group 3

Problem 2

# Part 1: Detection

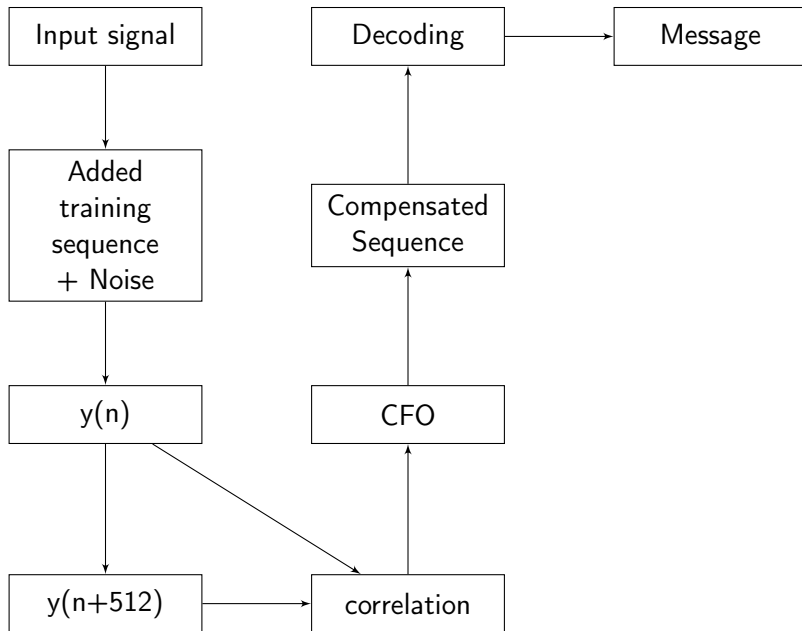

## Block Diagram and Approach

## Limitations

- ▶ At SNR -15, we are getting an error of 9% .

## Part 2: Frequency Synchronization

## Part 2: Frequency Synchronization

### Assumptions

- ▶ We took the offset= $2 \times \pi / 1050$ .

### Limitations

- ▶ We can't put offset  $> 2 \times \pi / 1024$ .

### Equation

$$R_{yy} = \sum_{n=0}^{511} y(n)^* y(n + 512) \quad (1)$$

$$= \sum_{n=0}^{511} |y(n)|^2 e^{(j\delta\omega \times 512)} \quad (2)$$
